. . . . DriversJoystickUsbBitromRar part of the Internet of Things as it offers a scalable and flexible solution. Getting started with Sensu is extremely easy, and best of all, you can get going with basic status checks without writing any code. This tutorial helps you to get a basic understanding of the Sensu CLI tool. Wi-Fi access devices such as routers and wireless access points are very common in many domestic and industrial environments. For many years we have relied on wired networks to provide network connectivity, but now, with the growing use of portable wireless and Wi-Fi devices, many homes and businesses are now moving toward an all wireless network. If you are a business owner or network administrator you may already have some experience in managing wireless networks. Now that you have several wireless devices on your network, you may find that you're running into problems accessing your network with Windows. Read on for some tips on setting up a wireless network and connecting to it in Windows How to execute simple shell commands and automate them In this video tutorial, I demonstrate how to execute a simple shell script or command and automate it. I use Linux Mint OS, but these basic concept can be executed in any OS. Managing Sensu Nodes I am working with Sensu on a particular event handler for load. This is a type of load which is coming from a number of sources, so I want to be able to create a load handlers for all sources. In this tutorial, I will explore the different ways to define handlers in sensu and how we can use them. Sensu is one of the most popular applications for monitoring server and services. Sensu can monitor the following services: HTTP, HTTPS, FTP, SSH, SMTP, IMAP, POP3, MQTT, and many more. In this article, we will show how to install sensu on an Ubuntu server. Apache monitoring with Sensu Apache is a very common web server, which we use to deliver our applications. If you run an Apache server on your home PC or web hosting site, you probably have an idea how to monitor it. In this video tutorial we'll show you how to monitor Apache using Sensu. We will start by installing Sensu on an Ubuntu server, after this we'll monitor Apache. This is very simple to do and we'll do it on Apache version 2
